RESULT 1
                       AAZ21481 to AAZ21495 represent fragments of the human sensory neurone specific 2a (SNS-2a) nucleotide sequence. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a medicament for the treatment of pain or hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                       Sensory neurone specific 2a; SNS-2a; sodium channel protein; pain; voltage gated; hypersensitivity; ss
                                                                                                                                        Mammalian sodium channel protein for treating pain and hypersensitivity.
                                                                                                                                                                 WPI; 1999-562112/47.

                                                                                   The present sequence encodes a type 5 sodium channel protein designated PNS. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                     This is the nucleotide sequence of a partial cDNA clone which codes for a comportion (see AAY80596) of human NaN, a "previously unidentified voltage cC gated sodium channel protein that is preferentially expressed in dorsal croot ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R cc sodium current. The NaN channel cDNA was obtained from human DRG tissue CDNA by PCR amplification (see also AAX87520-22). Rat, mouse and human CC NaN nucleic acids (see AAX87600-02) and polypeptides (see AAX06596-98) cc are provided. The invention also includes expression vectors and ct transformed host cells, methods for identifying tissues and cells that cxpress NaN, methods for identifying agents that modulate NaN channel cc express NaN, methods for identifying agents that modulate NaN channel cc transformed such agents to treat acute or chronic pain, paraesthesia and chyperexcitability phenomena. The preferential expression of NaN in sensory DRG and trigeminal neurons provides a target for selectively condifying the behaviour of these nerve cells while not affecting other corrected that the brain and spinal cord. The gene is named SCN11a

The present sequence is that of a partial cDNA for a novel human tetrodotoxin resistant sodium channel, termed NaN (see AAB20125). The cDNA was isolated from a human dorsal root ganglia tissue cDNA library by PCR amplification (see also AAF30122-23). A full-length sequence is given in AAF30101. Human NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Proferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN
                                                                                                                                                                      Sodium channel alpha subunits SCN12A and SCN8A of human nervous system together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; gene; ss; sodium channel subunit; SCN12A; SCN12A-s; human nervous system; chromosome 3p23-21.3; excitatory cell drug development; familial hyperglycaemia; QT extending syn

The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A-s sodium channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 5728 BP; 1637 A; 1241 C; 1199 G;
                           The present sequence is that of cDNA encoding a novel human tetrodotoxin resistant sodium channel, termed NaN (see AAB20121). The cDNA was isolated from a human dorsal root ganglia tissue CDNA library by PCR amplification (see also AAR30122-23). NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of
                                                                                                                                                                                                                                                                                                                        Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sodium channel; NaN; human; tetrodotoxin resistant; pain; paraesthesia; hyperexcitability; analgesic; vaccine; gene therapy; diagnosis; ss.
                                                                                                                                                                                                                                                           Claim 1; Fig 11A; 162pp; English.

Preferential expression of NaN on sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN polypeptides
                                                        Expression vector useful for stable cloning and expression of Navl.9 sodium channel at the mRNA and protein levels comprises a nucleic acid sequence that encodes a mammalian Navl.9 sodium channel protein or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 5860 BP; 1628 A; 1313 C; 1293 G; 1626 T; 0 U; 0 Other:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ક
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                its fragment, and producing a sodium current when transfected in a cell.

C Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a [method of making a cell or cell line that produces a Na v 1.9 cell that has cell conditions that allow expression vector; and (b) culturing the cell cunder [conditions that allow expression of Na v 1.9 sodium channel protein cell produce a sodium current into the transfected cell; (3) a method of exposing the cell or cell line produced by the method to the agent; and cell that modulates sodium current in a cell by: (a) composing the cell or cell line produced by the method to the agent, where an alteration in the level of sodium current is indicative of an agent ceapable of modulating sodium current in a cell; and (4) a recombinant ceapable of modulating sodium current in a cell; and (4) a recombinant ceapable of modulating and expression vector. The expression vectors are useful cor the stable cloning and expression the have 1.9 sodium channel currents channel at the mRNA and protein levels, and for producing sodium channel currents considered sequence encodes a human Na v 1.9 sodium channel protein, which is necessary invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A sodium channel subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sodium channel alpha subunits SCN12A and SCN8A of human nervous system together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ganglia cDNA by PCR amplification using rat NaN-based primers (see AAX87618-19). Rat, mouse and human NaN nucleic acids (see AAX87600-02) and polypeptides (see AAX06596-98) are provided. The invention also includes expression vectors and transformed host cells, methods for identifying tissues and cells that express NaN, methods for identifying tissues and cells that express NaN, methods for identifying agents that modulate NaN channel activity or NaN channel mRNA transcription or translation, and a method for using such agents to treat acute or chronic pain, paraesthesia and hyperexcitability phenomena. The prevides a target for selectively modifying the behaviour of these nerve cells while not affecting other nerve cells in the brain and spinal cord. The gene encoding NaN has been named Scnila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-JAN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                      sensory neurons innervating the body (dorsal root ganglia) and the face (trigeminal ganglia), but not on other neurons, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed method of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates transcription or translation of NaN mRNA, in dorsal root ganglia or trigeminal neurons. NaN nucleic acids are used in
                                                                                                                                                                                                                                                                                                                                                               gene therapy to correct disorders associated with decreased sodium channel expression or (antisense) to down-regulate NaN expression, diagnosis of disease, and in the recombinant production of NaN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              chromosome 9. NaN belongs to the a-subunit voltage-gated sodium channel protein family and produces a TTX-R sodium current. Such channels underlie the generation and propagation of impulses in excitable cells such as neurons and muscle fibres. Preferential expression of NaN on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of cDNA encoding a novel mouse tetrodotoxin resistant sodium channel, termed NaN (see AAB20124). The cDNA was isolated from trigeminal ganglia cDNA using primers (see AAB20120-21) based on rat NaN sequences. Mouse NaN shows 68% similarity to human NaN (see AAB20121). The gene encoding NaN, termed Scnlla, is located on mouse (see AAB20121).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding human tetrodotoxin resistant sodium channels, useful for preventing, diagnosing and treating pain, paraesthesia and/or hyperexcitability phenomena.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Dib-Hajj S,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polyA_site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polyA_signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SGD

                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an expression vector comprising a nucleic caid sequence that encodes a mammalian Na v 1.9 sodium channel protein or its fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pCMV-rNaN-GFP, pLG338XM-rNaN and the plasmid described above; (2) a |method of making a cell or cell line that produces a Na v 1.9 sodium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell under |conditions that allow expression of Na v 1.9 sodium channel protein to produce a sodium current into the transfected cell; (3) a method of screening for an agent that modulates sodium current in a cell by: (a) exposing the cell or cell line produced by the method to the agent; and cell basauring sodium current following exposure to the agent; where an alteration in the level of sodium current is indicative of an agent capable of modulating sodium current in a cell; and (4) a recombinant cell in the cell of sodium current is and cell and (4) a recombinant cell in the cell of sodium current in a cell; and (4) a recombinant cell in the cell of sodium current in a cell; and (4) a recombinant cell in the cell of sodium current in a cell; and (4) a recombinant cell in the cell of sodium current in a cell; and (4) a recombinant cell in the cell of sodium current in a cell and (4) a recombinant cell in the cell of sodium current in a cell and (4) a recombinant cell in the cell of sodium current in a cell sodium current in a cell cell in the c
                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                    cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a mouse Na v 1.9 sodium channel protein, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Expression vector useful for stable cloning and expression of Nav1.9 sodium channel at the mRNA and protein levels comprises a nucleic acid sequence that encodes a mammalian Nav1.9 sodium channel protein or its

The method comprises determining the genotype of at least one gene selected from SCNIA, SCN2A or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium. SCN1a, SCN2A and SCN3A are all sodium channel genes located on chromosome 2. The idiopathic generalised epilepsy (IGE) gene is more specifically localised on chromosome 2q23-q31. Compounds identified as modulators of the biological activity of SCN1A, SCN2A or SCN3A proteins or genes, are useful for treating epilepsy or other neurological disorders. They have anticonvulsant and neuroprotective activities. AAH55763 to AAH56164 and AAB99679 trepresent SCN1A, SCN2A, and SCN3A cDNAs, gene fragments, PCR primers, oligonucleotides and proteins given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determining a predisposition to epilepsy and/or development of epilepsy comprises determining the genotype of SCN1A, SCN2A and/or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; epilepsy; chromosome 2; SCNIA; SCN2A; SCN3A; identification; diagnosis; mutation; chromosome 2q23-q31; neurological disorder; anticonvulsant; neuroprotective; ds.

The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related

The present invention describes an expression vector comprising a nucleic control of the present invention describes an appression vector comprising a nucleic carid sequence that encodes a mammalian Na v.9 sodium channel protein or cits fragment, and producing a sodium current when transfected in a cell. Also described: (1) a recombinant cell comprising the plasmid selected from prNaN, pcMv-rNaN-GFP, plG338XM-rNaN and the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 codium channel-dependent sodium current by: (a) providing a cell that has been transfected with the expression vector; and (b) culturing the cell cunder conditions that allow expression of Na v 1.9 sodium channel protein to produce a sodium current into the transfected cell; (3) a method of correcting the cell or cell line produced by the method to the agent; and cell exposing the cell or cell line produced by the method to the agent; and capable of modulating sodium current is indicative of an agent capable of modulating sodium current is indicative of an agent capable of modulating sodium current is a cell; and (4) a recombinant cell capable of modulating sodium current in a cell; and vectors are useful cell comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel currents characteristic of native currents in dorsal root ganglion neurons. The present sequence encodes a rat Na v 1.9 sodium channel protein, which is used in the exemplification of the present invention.
